Lipo-Capsulation

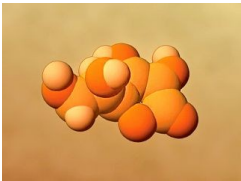

Naturally Superior Absorption

Vegan · Non-GMO · Non-Allergen · Gluten & Soy Free

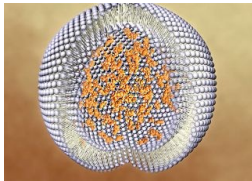

Our formulas ensure maximum benefit from each nutritional dose and eliminate the negative side effects associated with non-absorbed nutrients.

Lipo-Capsulation protects nutrients from digestive enzymes and passively diffuse through the walls of the small intestine directly into the bloodstream. Once in the bloodstream they merge into cell walls releasing their contents directly into the cell resulting in optimal distribution to the body.

Nutrients Released Directly into Cells

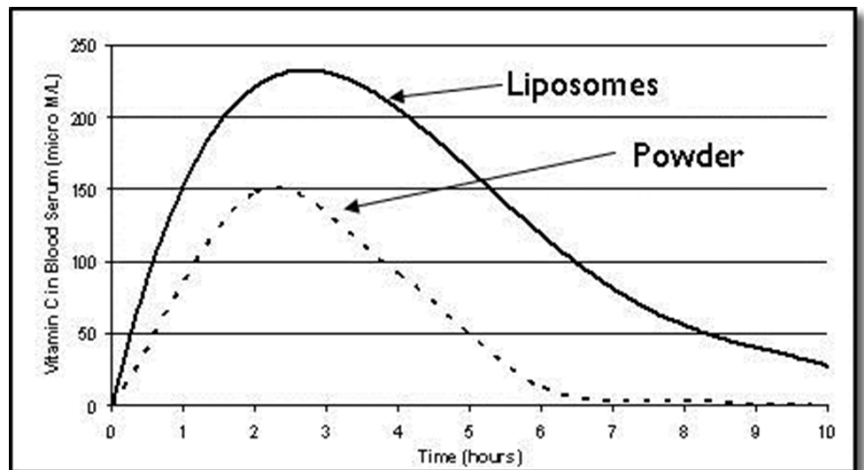

Lipo-Capsulation brings the power of intravenous therapy into a convenient liquid oral delivery.

Lipo-Capsulation has revolutionized how well nutritional supplements can be used by the body.

The absorption of conventional oral Vitamin C diminishes rapidly as the dose increases (e.g. about 19% for 1,000 mg of conventional oral Vitamin C).

Lipo-Capsulation delivery greatly increases absorption and for some compounds can provide IV level intracellular delivery.

Blood serum levels of Vitamin C as a function of time after the subjects ingested a single 5 g dose of vitamin C
Study conducted by University of Colorado, Boulder
